WATER COOLED SPLIT UNIT

DATA CENTRE COOLING

- 7.3kW
- Cooling Standard
- 13A supplied
- Umbilical lines can be extended to 35m
- 9c -38°C operating range

ABOUT THE RANGE:

This low GWP version of our industry standard LCH7.3 sees it upgraded to meet modern environmental standards while still promising up to 7.3kW of cooling without the need for ducting.

This makes the ideal for use in data centres, especially as the main unit and outdoor section can be up to 35M apart. With digital thermostatic control, twin louvre directional and variable speed control the LCH7.3 can have it's air delivery tailored to suit a range of needs, while a status panel lets you know what the units is doing at a glance and low temperature operation is also included as standard. With all this in mind, the LCH 7.3 has reset the standard for portable split air cooling equipment

Suitable almost any cooling application the LCH 7.3 offers the most efficient and effective portable air conditioning available by using water instead of air to remove heat. The LCH7.3 avoids the sweating effect of the condenser in traditional air conditioning systems to deliver 7.3 kw of chilled air. The main unit can be sited up to 35m from the outdoor section which allows them to be used in areas deep inside buildings or without anywhere to vent the hot air associated to the monobloc Systems

IDEAL FOR:

- Data centres
- Portable buildings
- Hospitals
- Gymnasiums
- Schools colleges
- Exhibitions
- Process cooling

UNIT SPECIFICATION:

Running current	11amps
Airflow	1450m ³ /hr
Thermostat	YES
Sound	60 dbA
Weight	125kg
Operating range	9 - 38c
Dimension	1350 X 820 X 380mm
